Hi,
Did you succeed to find sollutions to fully use your VXA 700.
I'm about to buy it and would like to know if there any possibilities
to extend tx/rx capabilities?
Thanks for your answers.
Henri

Henri,

I have owned this radio almost a year and I haven't come across any mods for it. I can say that as an aircraft transciever with ham capabilities this radio is great. However, I am glad that this is not the only handheld ham radio I own. It certainly lacks the bells and whistles on my VX-7R. I use it primarily at work (I am an avionics technician), and as a back up when I fly.

Everyone else,

I was about to start my own group on this radio when I ran across this one. I hope it grows!

Bob

8. change program frequency step

Yahoo group: vxa700
Date: 2005-10-18 04:59:12 UTC
From: andersonwb
Topic: 8 Message: 8

I have owned VXA-700 for a couple of months. Recently I have tried to program an aviation frequency for an FBO, 131.62. This required a step different than the 25kh step programmed. The manual indicates that it is possible to select different step sizes. I attempted to change the step size and could change it on the amateur bands but not on the aviation band.

Does anyone have any suggestions?

Thanks for the help.

Bill Anderson

Thanks for the response,
You're certainly right, it's better to have this radio for serious situation and an other one (eventually with mods) for a wider range of use...
Thanks again

Glad you found it. I have been trying to get the word out on the aviation forums when people begin to talk about ham radio or what handheld to buy.

There was a group on this radio about a year ago but the person running it kept such a tight fist on the operation that no one could get subscribed. I want to keep that open and unlike the old board, which by the way no longer exists, I have opened the files, links, polls, etc. sections for your use.

12. Re: [vxa700] Digest Number 1

Yahoo group: vxa700
Date: 2005-10-19 00:02:03 UTC
From: Robert Thornburgh
Topic: 12 Message: 12

Bill,

Where's that FBO at? Anyway, I get 131.625 when I try it, which is what I'm sure you're getting as well. I don't think there is anyway to change the step in the air band. I can select it when I am in the air band and the step blinks as if I could change it, but it doesn't change. Kind of frustrating if you wanted to use 12.5 KHz spacing in the United States, probably even more frustrating if you needed 8.33 KHz spacing in Europe. Does that fact that it is 5 KHz off really prevent you from using the radio at the FBO? Most radios that I am familiar with usually have enough bandwidth on recieve that 5 KHz wouldn't make that much of a difference.

Scott,

I agree about keeping the group as open as possible, with safeguards to prevent spammers. Looking forward to being active in the group.

HIi guys,

I read on some sites that the VXA700 was very tough to use and quite complicated.
I'm a debutant and I can say that I found it easy. Accessible menu, simple memories, great visuals.
I'm very happy to own it.

The sound is good when the reception is ok. Good as well for WFM reception.
The bad point is that I think I should invest in a mobile antenna to receive the control towers emission from my 1st level appartment. I well receive the emission from plane but not from the tower. I'm a bit too far I think, about 15-20 Kms.

Have you tested any antenna on you VXA 700? which one is great?

It sounds that it's possible to increase the power momentarily, do you know something about that?
Thanks for your response.

From: Robert Thornburgh
Topic: 14 Message: 14

Henri,

I use a short, flexible heliocoil thingy. But then I am always right at the airport where reception isn't an issue. I don't know who made the one I have, but Maldol makes a bunch just like it. For my VX-7R I use an aftermarket flexible antenna with a 6 inch (~ 15 cm) whip, and it receives signals MUCH better on 2 meters and 70 centimeters than the rubber resistor that came with the radio. Again, I'm not sure who made mine, but I think Diamond makes some that are just like it.

Of course, if you're just sitting around the house nothing beats an outdoor antenna, even if it is just a mag mount on the patio rail.

From: ecoblue_divers
Topic: 15 Message: 15

This is from another web board and I am posting it here fyi:

In case anyone is looking to purchase a VXA 700, don't be fooled into buying the VXA 710. Despite what the vendor may tell you, they are not the same. I just ordered what I thought was the 700 and recieved the 710. The 710 does not have the ameteur band, it has RX only on the Business Service Radio? Not sure how that benifits Aviation Folks? I called the vendor and they told me that the 710 was just an upgrade of the 700, not the case. They and many others have been told this incorrectly from several distributers. I checked other websites and the 710 seems to be the only version I can find now. Did VS discontinue the 700?

I called Vertex Standard as well, they seem to be just as clueless. Their website doesn't even list the 710. The first person I talked to said they still sell the 700. I called back with another question, talked to another person and wanted to confirm that they still manuf. and sell the 700, he wasn't sure and said he will call me back with the info. Haven't heard back yet....

Buyer beware!

Doing some further checking it the VXA710 is Ariband only, now ham band. here are the specs

The VXA-710 is Vertex Standard's newest Air Band transceiver featuring both VOR Navigation and Amateur Radio transceiver operation, all in one. Many pilots are also FCC-licensed Amateur Radio operators, as well, and the VXA-710 provides 5 Watts of AM P.E.P. power on the Aviation band, along with 5 Watts of FM power on the 2-meter Ham band, to keep you in touch wherever you operate.

New to the VXA-710 is the full color Strobe LED, which provides indication of a number of transceiver status items using different colors. Different colors may be selected for each of condition. A total of 256 color shades are available for customizing. Also new to this model is Business Radio Service Reception.

Features:

* Power Output: 5 watts Airband, 5 watts 144-148 Mhz FM
* Receive: Airband 108-137 Mhz, NOAA Weather, FM Broadcast 88-108 Mhz
* Lithium-Ion Battery powered with 1300 Mah of battery capacity (rated battery life16 hours using IEE standard 5%, 5%, 90% method)
* Rugged Magnesium Die Cast Casing
* Submersible (3 ft for 30 Minutes)
* Muli-colored strode LED for status Indication
* High Resolution Dot Matrix Display
* VOR/CDI Navigation Display
* DCS/CTCSS operation for 144-148 FM band
* 192 Memory Channels with 8 character Alpha Numeric Display
* Back-Lit Keypad and Display with Dimmer
* Direct Frequency Entry
* PC Programmable
* RX Battery Saver (prolongs battery life)
* One Touch Emergency Frequency (121.5 Mhz) Access
* NOAA Severe Weather Alert

Included Accessories:

* LI-ion Battery Pack FNB-80LI (7.4V, 1300 mAh)
* Battery Charger NC-72
* Helical Antenna ATV-9
* Headset Cable CT-96
* Operating Manual
* Warranty Card

Another very workable option would be to add airband TX into the VX-5 or VX-7 which already have the RX for airband as well as the other suggested Ham bands.

20. VXA-710

Yahoo group: vxa700
Date: 2005-11-14 07:22:51 UTC
From: lucifer_gr
Topic: 20 Message: 20

Hello everybody!

As a new member of the group I would like to post my experience with this new transceiver.

A week or so ago I got VXA-710, instead of VXA-700 which I had ordered. The store from which I purchased it ensured me that it is a 100% replacement of the -700.

Note that the transceiver was some kind of "open", listening from 137 to 165 MHz, and I thought that changing the jumpers positions, maybe it could be possible to transmit in the 2m band (I am a licensed radio amateur).

After changing the first jumper and a "system CLR", the transceiver LOST the whole VHF band, changing only between AIR and WFM!!! Every attempt to recover was unsuccesfull. I have tried every position of the four jumpers, without result. Now I have only the AIR-BAND and FM broadcasting band available. Oh! yes... And the weather channels and I am convinced that the transceiver can NOT transmit in the 2m band as the ads claim, not even receive the band for listening.

I wander why Yaesu discontinued such a succesful rig.
Any ideas would be highly appreciable.

Stelios

Stelios,

Bummer about your new radio!

I'm not sure how many of the VXA-700s Yaesu sold, but I'm sure it was nowhere near as many as their VX-7Rs. I can't imagine this radio would be too popular with anyone who wouldn't specifically have a need for it as it is more expensive than a regular handheld NAV/COM. Now that you've "modified" it there probably isn't any chance you could return it and try to find an actual VXA-700, and I'm sorry to hear that.

Mark,

I kind of thought it would be - thanks for the confirmation. I've been thinking a lot lately about buying the software programming kit, but I've yet to meet anyone who has actually used it so I was curious about the cable itself. A bit of a moot point, really, because I haven't found anyone who sells just the cable or just the software. At about $80.00 a pop for the whole kit I was hoping I might be able to cut a corner somewhere.

Topic: 35 Message: 36

Andy,

Go into the menu set mode. Go to 5 "key set". Go to 1 "Lock mode". From there you should be able to change the setting to "Dial / Key / Key+Dial / PTT / Dial+PTT / Key+PTT / or All". Info found on page 52 of the manual. Hope this helps.

Topic: 40 Message: 41

I use the Comet SMA-24 which gets better reception on the aircraft bands, but I have no idea if the transmission is better. Perhaps not since the antenna is for the 2 meter band. It is also kind of unwieldy in your aircraft bag due to its size.

Regards,
Seth

42. VXA-700 programming software.

Yahoo group: vxa700
Date: 2006-09-27 21:41:57 UTC
From: Bob
Topic: 42 Message: 42

Hello all,

I finally got around to plunking down the money for the programming cable and software, and of course it doesn't work.

I'm using a HP Pavilion ZV5000 laptop with the HP notebook expansion base that has a serial port output. The Vertex Standard (not RT Systems?) software can utilize com ports 1-4, and it seems to having issues with com ports 1-3 but it accepts com port 4. Plugged the radio in and followed the upload instructions and nothing happens. Checked my system hardware and the computer is either not recognizing or not letting me see com ports 1-4. Lowest com port I can see is com port 5, which I use for VX commander. While I'm sure the fact that I can't see a com port 1-4 is my problem, I don't know what I can do (if anything) about it.

Does anybody have any suggestions?

Bob, KJ5IK

Looking for a CD-15A Desktop Rapid Charger for my 700. Best prices I have found so far is $33.15 from Spinner Pilot Shop:

http://www.spinnerspilotshop.com/cgi-local/SoftCart.exe/scstore/p-cd-15a.html?L+scstore+fwdl1822ff5daf5d+1162360191

Also Batteries America:

http://cc.msnscache.com/cache.aspx?q=4373971344742&lang=en-US&mkt=en-US&FORM=CVRE4

FNB-80Li 7.4v 1400mAh Lithium ION battery pack. $ 39.95 ea.

Also available: CD-15A rapid charger $ 32.95 ea.

Has anyone seen either of these items for less.

I will thank all and any for their time to reply.

I have two VXA-700s, can't use more than one, so one's for sale. Figured I'd see if anyone in the group wants it before I go to eBay. MARS mod is enabled. Really clean, good battery, everything seems to work.

$350 shipped, UPS ground to USA 48 only. Paypal.

If interested, email me direct, craftemail@...

47. Slow AGC in Air-Band?

Yahoo group: vxa700
Date: 2007-03-05 07:29:21 UTC
From: styroflyer
Topic: 47 Message: 47

Hi all,

as I am new to this group as well as to the VXA, I have a question
regarding the behaviour of the VXA's RX when using AM modulation.
I bought a used VXA700 some days ago and noticed the following phenomenon:
When receiving strong signals, during the first about half a second,
the receiver distorts the received signal. Therefore, the first part
of a message is either difficult or even impossible to understand.
Is this a usual behaviour, or do I have to dig into the details of the
receivers AGC?
Does anyone here have access to a service manual?

Kind regards to everybody from Blackforest, Germany

Friedhelm

Topic: 58 Message: 59

Hi,

anyone here with a service manual of the 710?
May be, Vertex didn't reinvent the wheel.
May be, a replacement of the microcontroller can make a 700 out of a 710....
A view into the technical details would clarify the situation.

Hello Tim.
I also recently bought one. Earlier this evening I threw caution to the wind and attempted to "freeband" the radio. I removed the one jumper that I thought might "open" the unit. After doing a reset the radio would tune ONLY am aircraft and broadcast fm. The vhf high band (receive) was gone!

So.... I re-soldered the jumper and did another reset. Unfortunately the unit still operates only on aircraft and bc fm bands. That's what I get for assuming that mod's on this unit would be as easy as what I've done on my VX-7R.

Perhaps there is a viable mod for this unit (I havent' checked mods.dk website yet). One thing's for sure. My attempt was unsuccessful and cost me part of the radio's capabilities as well.

Oh well.... we live, we learn.

Topic: 58 Message: 66

Greetings
Curious if anyone has made any progress in figuring out weather or not the 710 can be modified to TX on the 2 meter and commercial bands?

Like most of you I carry it for a back up in the cockpit however I'd like to be able to use it out in the field during ARES/RACES exercises or when I'm backpacking....really don't want to buy the same radio a second time just to be able to TX on the ham frequencies.

Anywho....love to hear if someone's figured it out. Having me touch or modify the radio has bad idea written all over it.....I'd like to have my radio tech in the ham club do it for me.

Thanks
mike

67. Motorola to aquire interest in Vertex

Yahoo group: vxa700
Date: 2007-11-06 21:04:41 UTC
From: ecoblue_divers
Topic: 67 Message: 67

This is certainly interesting.

SCHAUMBURG, Ill. and TOKYO, Nov. 5 /PRNewswire-FirstCall/ -- Motorola, Inc. announced today that its subsidiary, MI, Inc., will launch a tender offer to acquire a controlling interest in Vertex Standard Co., Ltd. (JASDAQ: 6821), a global provider of 2-way radio communication solutions. Upon successful completion of the tender offer and subsequent restructuring process, Motorola will own 80% of Vertex Standard and Tokogiken, a privately held Japanese company, controlled by Jun Hasegawa, current president and CEO of Vertex Standard, will retain 20%, forming a joint venture. On 5 November 2007, the Board of Directors of Vertex Standard expressed their support of the tender offer.

"As a leading provider and pioneer in 2-way radio communication solutions, Motorola is an excellent strategic partner for our business," said Jun Hasegawa, president and CEO of Vertex Standard. "The joint venture will give Vertex Standard access to Motorola's global distribution channels, presenting considerable opportunities for Vertex Standard to drive growth. We also expect to reduce costs, as we will benefit from Motorola's global scale and resources. With Motorola, Vertex Standard will be stronger and better positioned to deliver new and innovative 2-way radio solutions for professionals and consumers around the world."

"This joint venture will enable Motorola and Vertex Standard to deliver an enhanced combined product offering to new regions and customers worldwide," said Mark Moon, senior vice president of Motorola's Government and Commercial Markets. "We are extremely pleased to announce this transaction, which will improve our ability to address the growing needs of our 2-way radio customers worldwide. We look forward to the continued leadership of Jun Hasegawa and making this new joint venture a success."

Topic: 68 Message: 69

Other than the case, there's nothing common between the VXA-700 and the VX-7R.
Unless you need the aircraft band or the VOR, there's not much reason to have a 700.
The memory handling and available software basically suck.

I use the Vertex CE56 software, which, as far as I know, is the only thing that works with a 700. The ADMS programming cable for the VX-7 and VX-6 works for the 700, although the 700 cable that comes with the Vertex software doesn't seem to work with the 6 and 7.

The CE56 software is glitchy and crude, but it gets the job done. If you need to MARS modify a 700 the only way I know is to get someone with a modified 700 to read their modified software with the CE56, then write that file to your radio. I've read of people playing with the jumpers but no one seems to have been successful opening the transmit range with jumpers; it seems to be a software-only mod. The reverse is also true. If you write a file from an unmodified radio to a modified one you kill the mod.

Vertex used to modify a 700 if you returned it with MARS or CAP credentials (although the 700 and most other 2 meter rigs are no longer legal for CAP) but I don't know if they still do.

Hope this is of some use; that's my total knowledge and opinion on the 700.

I'm forced to agree with Charlie - the software sucks! But it also appears to be the only game in town. On top of that it is way too expensive considering all of the glitches and lack of support. I was e-mailing back and forth with a ham in Switzerland about four months ago who said he got it for free from Yaesu. If true that would be a good thing for everybody who doesn't have it yet.

As far as using the VX-7 cable goes, I seem to remember a piece of paper coming with the software and cable that I bought that you shouldn't use a VX-7 cable with the vxa-700. If the VX-7 cable does work, that coupled with free software would be a boon for everyone on the list.

Bob, KJ5IK.

Hello,

I am a pilot and a ham that carry's the VXA-700 in my survival vest. In fact, I have two VXA-700 and a VX-7R. I also have the Vertex CT-42 two piece cable and the Vertex software for windows on cd. In addition I have an ebay (don't recall the seller) cable for the VX-7R. I did try the CT-42 on the VX-7R with no joy. I was under the impression that the interfaces were completely different. After following this thread I tried the ebay cable on the VXA-700 and found it to work with the Vertex software. I was able to upload and download to the VXA-700 without a problem with the relatively inexpensive ebay serial (not usb) cable.

Now some potentially good news. Somehow I wound up with two of the Vertex programming CD's. I had thought the second CD was virtually useless without the cable and have kept it as a backup for the last couple of years. I would be willing to sell the extra unused CD for a minimal shipping and handling charge of 10.00 USD to anybody in the continental US to be shipped via priority, USPS mail. I have never installed the extra software on any computer, so I don't think I am breaking any copyright laws and I'm not trying to charge for the software anyway, just shipping and handling. If I am violating any forum rules or copyright laws, somebody please let me know and I'll discontinue the offer.

First forum user to speak up and paypal me the 10.00 will have the cd sent to them the following day.

Again, if any of this is breaking any law, rule or regulation I'll have to cancel the offer and hang on to the extra cd.

I am only trying to help another pilot / ham.

If somebody can prove to me somehow Vertex is now giving away the software, I would be happy to upload it to the files section, assuming that is also legal. (It's only about 3.5 mb's worth of files and data)

73,

Mark N6EA

From: Mark (N6EA)
Topic: 73 Message: 73

Hello,

Ask and you shall receive.

Below is an email I sent to Vertex asking about CE56 software. As you can see Mr. Godoy was good enough to send me the zip file directly. I have uploaded it to the files section.

If users could post the results of it's use with some of the different cables out there, we might be able to help one another out.

So far, I can verify the software works with both the original ADM CT-42 cable as well as a generic serial cable (db-9) that I had purchased for use with my VX-7R a couple of years ago.

BTW, if you notice, the files are in three separate folders for use from three floppys. You remember those. Anyway, you can put all the files in one folder and run the setup to install. No need to make three floppys.

Happy Flying and 73,

Mark N6EA

Hello,
It has been mentioned that the CE-56 software for the discontinued VXA-700 is available for download from Vertex although I cannot find it. Can you point me to a link? If not is it still available at all? For sale or?
Thanks in advance,
Mark

Finally getting around to using my 700 after about 2 years of looking @ it in the box. Fired up the Software and did the upload. All I see is line 1. AM 118.000 ---- ----- ----- ---Hi Pwr 25 K step etc etc. All other lines are gray. There are a bunch of freqs etc in the radio as I can step thru them and listen. But upload and changeable, what upload file and where did it go. I hate this program already. Is there a software manual that steps you thru this nasty program? Took me hours just to get a serial adapter to USB to work. I have about had it already and I just got started. Any assistance would be appreciated, to include thoughts on a program that actually works and how to use it is a bit more intuitive.

So I find that a bunch of freqs are programed and the dial will switch in WX mode and BMR. But in normal MR it stays on channel 1 and will not go to channel 2. I thought my AOR AR8000 was a tuff customer. This radio and software is the absolute worst pairing I has ever seen. 3 functions per button junk. Why can't I switch to channel 2 with the dial.

Garth,

The computer I use to prgram my radios is currently down or I'd be able to help you plod through the program. Sorry.

Lack of ease of use isn't the only problem with this awful, awful program. The thing I find most annoying is that some of the frequencies you enter in the program don't make it intact to the radio when you upload the file. For instance, every time I try to program 147.140 using the software the radio receives it slightly off frequency. So if you end up getting a successful upload to your radio be sure to dial through and make sure all the memories are actually what you wanted.

85. CTCSS Operation in VXA-700

Yahoo group: vxa700
Date: 2008-07-12 01:07:11 UTC
From: nullrouten
Topic: 85 Message: 85

I have a VXA-700. I am a licensed HAM. I am attempting to set a CTCSS tone (Sub aidible PL tone) for local repeater use, and the setting only sticks in VFO (manual tuning) mode. If I store frequencies in MR mode (Memory Recall)... the CTCSS tone defaults to what I set in VFO mode, and changing it is not effective.

The memory is useless for 2m use if I cannot store proper PL codes with each repeater frequency.

Does anyone else have this problem?

Note: I purchased my radio 3-4 years ago, and it has never seen a service tech so the radio firmware could be old (if its even upgradable I dunno).

I do not have the programming cable or software... and after a call to tech support (Yaesu/Vertex Standard) they suggest that I might be able to store custom CTCSS codes with the software. Of course they couldn't actually confirm that and recommended that I buy the cable. :/

From: kalleflygare
Topic: 87 Message: 87

Hello all,

I recently purchased a vxa-710 and I must say I am very happy with it so far. Since I already have programmed a lot of channels I wanted to do a backup and bought a cable for it. Since I found no original supplier in Sweden I bought a third party cable. Unfortunately when I try it with the CE56 software I get a hardware error message.

Has anybody else experienced the same problem using CE56 with VXA-710? Does anybody know if the new software, CE75 is available anywhere. Not bundled with the cable off course...

Regards
Karl

Topic: 68 Message: 88

Hi Group,

in the below mentioned posting, there is a hint on how to get the MARS CAP mod done.
Unfortunately the official way through the Vertex service is not possible in Europe. But since I have software and cable, there might be a chance to get my VXA modified that way:
Is there anybody out there, who can send me the below mentioned software (memory setting?) to try to reprogram my VXA?
Btw. I do not ask for this mod to do stupid things! We have a commercial frequency allocation above 148MHz and in case our professional equipment fails (It unfortunately does from time to time) I would like to be able to use the VXA instead.

Thanks,

Friedhelm

Topic: 90 Message: 94

Hello group,

would like to share a strange problem using CE75 software, both Ver.1.02w (thanks Stelios) and Ver.1.01w (from http://www.vertexstandard.com).

My feeling using the software is that it is impossible to program any frequency such as xxx.0xx MHz (118.025 MHz for example). Every attempt to put zero after decimal point fails and software automatically miss this position.

Any comments are welcome.

Best regards,
Stoyan

I've been running Yaesu/Vertex radios since 1970....I currently own 4. They are EXTREMELY reliable, but a defective piece can slip through, no matter who the manufacturer is. As was suggested, your first point of contact should be the dealer if it's a brand-new new radio. If not, contact Yaesu/Vertex for service.

Topic: 105 Message: 107

It's a total piece of junk. If you want to read it in inches, it only reads WHOLE inches. Totally useless. The other barometric units have better resolution, but the readings change for no reason. I set the altimeter function to the elevation in my house, and a few minutes later it was off by almost 100 feet. This happened every time I tried to use one so I gave up. I had/have two different radios with the SU-1 and both worked equally poorly. Not sure anymore whether my current radios have them or not because I won't waste any more time trying to use them. Don't know if it's temperature changes inside the case, or perhaps pressure changes in the sealed case caused by temperature. I've heard other people have the same problem.

Bottom line, don't waste your money on an SU-1.

108. Looking for a VXA-700

Yahoo group: vxa700
Date: 2011-04-19 04:09:33 UTC
From: gavinmrogers
Topic: 108 Message: 108

Hi all,

I am a HAM who recently bought my first airplane. I would like to have a backup radio in my airplane in case of electrical failure etc. Is there anyone out there who might be willing to sell their VXA-700?

Sincerely,

KC9KVQ
Gavin

109. dead radio - thanks TSA

Yahoo group: vxa700
Date: 2011-08-01 15:59:34 UTC
From: Rick
Topic: 109 Message: 109

Following my most recent pass through TSA screening and flight, my VXA-700 will no longer power up at all. I have traded batteries with another Vertex/Yaesu radio to verify that the battery is not an issue. I have also tried to run it off external battery power input without success either. Am open to suggestions that don't involve disposal.

Rick - N7PHB

Rick, do you still have your 700? I hate to read that yours is DOA.

If you still have it, did you try the CPU Reset on page 50 of the owner's manual?

Before anybody else reading this 'tests' doing a reset, be warned:
All memories and settings will be lost.

1. Turn off the radio (if it happens to be functioning of course)
2. Press and hold the MW-button, and the Monitor button at the same
time while turning the radio ON.

If that doesn't bring it back to life, then consider it's value by selling it for parts online. Please don't dispose of it! There are many VXA-700s still working out there, like mine, that may need to be re-cased or need an internal component, such as an LCD display, later on.

As for going through the machine at the TSA checkpoint, it could possibly have been excess RF of the x-ray process that damaged an IC or other component. I have brought mine with me also on trips, but from now on maybe I'll remove the battery when I take it through TSA or just not bring it with me in the future.

Chris

I travel for work and this goes through the xray in my carryon several times a week, never had an issue! Perhaps send it back to Vertex for an alignment? I think they charged me $45 last time I sent it in and they kinda give it a once-over.. could at least tell you what's wrong, or at best they fix it!

132. VXA-700-AM interference/ extended RX/software

Yahoo group: vxa700
Date: 2013-02-06 22:34:34 UTC
From: iphone.pavan
Topic: 132 Message: 132

Hi, i have recently bought the VXA-700 and have some questions. First question, is it standard to have like up to over 156 mhz RX? The manual is saying 148 mhz. Or does that mean my radio has extended RX?

Does the VXA-700 have the possibility for icons on the screen? The VX-7 got this possibility and it has a icon editor in the software where you can make your own icons.

Is the CE56 the only software for the VXA-700 or is there other kinds of software for the radio, for example Alignment or adjustment software or something else? And have there been written any thing else besides the operating manual and the Service manual that one should have?

My last question is about interference on the AM band, do you have any interference on the AM band on your VXA-700? My VXA-700 is extremely sensitive for interference on the AM band from all kinds of electronics. I dont have any interference on the FM band, its only on AM. Even the Yeasu´s own car adapter is interfering. Is this normal on these radios or can something be done about this? Maybe some kind of adjustment?
Thanks for some answers.

Regards.

From: Joe
Topic: 132 Message: 134

Not sure why the book reads that way, but stock it has the RX ability pretty wide open.

No idea bout icons...

The CHIRP software (http://chirp.danplanet.com/) works to program the VXA-700

AM is notoriously noisy... though I have not noticed any interference like you've described..
Yaesu will do a tune/adjust for a bench fee of (don't quote me) around $45 plus shipping and they will have your radio for 3-7 days..

Hope that helps!

The service manual has been added to the files section. Thanks to those that provided it.

I think I could solve my problem if I could get my hands on an operating manual.

I seem to have stuck the radio in a squelch mode that now requires me press the squelch button under the PTT switch to hear anything on the aviation band.
I would like to get it back to normal ops, where an incoming signal will break the squelch and let me hear it automatically (while keeping the radio quiet when there are no signals.

Any advice for the fix
How can I get my hands on a manual?

Thanks
Rusty

Hi Chris
If you still have the PDF for the service manual, I am interested. Also interested in the operating manual.
Thanks
Rusty

Rusty,

Is it possible you have accidentally set a tone encode on the frequency you're trying to listen to? If it's in a memory go to the memory and press F then SET. Use the outer knob to scroll down to 3.Receive and press SEL. Use outer knob again to scroll down to 7.SQL type and press SEL. Press SEL again and use the outer knob to select Off. Press the PTT key to back out of menu mode. Remember to re save the memory channel or it will revert to the previous setting if you move from it and then go back. Hope this helps!

Not my auction and I don't know the guy but you rarely see these for sale. I have two already or I would probably be bidding.

143. Does anyone have a VXA-700 for sale ?

I know this is a longshot, since I guess you're all here because you enjoy your radios...

...but: Does any of you have a VXA-700 for sale?

Being a powered paraglider pilot AND a licensed ham, this is the perfect radio for me. I already own one, but would like to have one more :-)

(Obviously the VXA-710 is NOT an option here)

Please PM or email me at espen@...m

Regards,

Espen Grimsland, LA9WTA

Hi Bob
Thanks for the info. I sent it to Yaesu a couple of weeks ago. It was a bad ceramic filter for the aviation band. Should have it back in a couple of days.
